

IUGS EARTH DAY EVENT

"THE STATE OF THE PLANET"

Planet Earth and its inhabitants are facing concurrent existential threats from climate change and biodiversity loss. Many parts of the world are already experiencing severe climate impacts, pollution, water and food insecurity challenges. Huge resource pressures and population displacements are forecast over the 21st century. This Earth Day event brings together international experts to give an overview of the state of the planet from their own perspective.

We envisage a panel discussion will explore how these different disciplines, perhaps working together, can meet the needs of future generations in a sustainable way.
